

Google Hangouts improved

Google added two new features to Hangouts which provide users the ability to adjust bandwidth and choose an audio only option

Tempo Smart Calendar

Tempo Smart Calendar is an innovative iOS app which uses machine learning techniques (same as Siri) to improve your planning and productivity

button on the device too is thinner than we'd like and has one capacitive button on either side. The device does feel comfortable to hold while using it in a single hand.

The HTC Desire SC has a curvy design and appears thicker than it actually is. It has a rubberized back giving it

a fantastic grip but the back is easily susceptible to scratches. The location of its rear camera is good for shooting in either portrait or landscape mode.

The HTC Desire VC on the other hand has a metal frame surrounding the display, which makes the display look protected. The rear of the device

has a textured rubberized finish, which feels very comfortable in one's hands. It feels really slim and light and sports a small metal cornering above the camera, which is just for show and has no utility.

The HTC 8S has a unibody rubberized soft feel polycarbonate design, which feels very

good. You do lose access to the battery here and the device supports a micro SIM. It's really light and a very beautiful looking device. The unit we received has a navy blue and light blue colour combination, which makes it stand out in a crowd. It also has slightly curvy edges adding to the grip and overall ergonomics.
