

Another World on BB10

The 20th anniversary edition of Eric Chahi's Another World is now available for BB10 devices
<http://dgit.in/Uil5F8>

RIM officially named BlackBerry

After years of waiting, "Research In Motion" has officially changed its name to "BlackBerry". This happened during the BB10 event in late January

and just generally working on the device was a lot of fun. The camera on the device could have been better though. The battery on this device is a behemoth easily lasting over a day of average use. LG has done away with the bad skins it was known for and kept it fairly simple. The stock icons may seem childish, but that is something you can

easily overlook. You also have access to a quick memo app that lets you take notes on the display or highlight certain things for a screenshot. In its benchmarks too the device has the ability to hold its own. Where it lacks is in the picture quality of the rear camera.

The Desire VC and the SV are dual-SIM devices. The skin

on the device is the same and so is the price point but the features on offer are very different. In its performance, not only was the SV a faster device, but it also has a better display and more RAM making the interface quite smooth. The Desire VC was plagued with lags and was quite disappointing to use. The camera on the SV too is better.

The performance of the battery is the only questionable factor as it barely makes it through the day. The Desire VC may have the looks but the performance rests with the Desire SV through and through. Last but not least we have the HTC 8S. It is the only device on our list to run on Windows Phone 8. The OS is very fluid and smooth and the only grudge we have with the device is the lacking app store. Consuming multimedia content on the device is a treat and the audio from the speakers is surprisingly good. The ability to resize the live tiles on the screen makes the display look alive and the OS is one of the simplest there is to navigate. The camera of the 8S isn't the best but it is snappy and produces decent images. The keyboard, ergonomics and overall usability of the device are very comfortable. HTC has added its own weather, stock and news feed to the device distinguishing it from other WP8 devices out there. The battery
