

HP's Android tablet?

If rumours are to be believed, HP is making a high-end Android tablet and also a smartphone which it might reveal at MWC this year

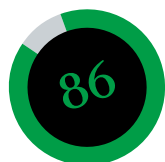

Will Apple TV be a hit in India?

The Apple device is officially available in India for about ₹8k, but does it make sense to have one in your living room? <http://dgit.in/12QANLK>

While it is a big phone, single hand operation is comfortable, helped by the non-slippery soft feel on the back. HTC Butterfly also has the IPX-5 water resistance rating. Charging status LEDs on the front and the back of the phone are a neat addition.

Butterfly is the first phone with a 1080p resolution, and the S-LCD3 display. The astonishing bit is the 440ppi figure (iPhone 5 display has 326ppi). The level of sharpness is incredible. S-LCD3 is a huge improvement over S-LCD2 in terms of colour richness and brightness levels.

Our benchmark tests peg this as the most powerful Android smartphone at the moment, comfortably trouncing the likes of the One X+ and the Note II. Apps open quicker than ever before as we

Price
₹45,990

experienced when we switched back to the One X+ or the Note II to feel the difference. Camera quality is rather disappointing. Photos are too soft and the area of focus is quite restricted. Low light shots are not as good as the One X+ or the iPhone 5.

On regular usage the battery lasts for a good 12 hours on auto-brightness. If you switch on the Power Saver mode, you get an additional 10 per cent more battery life. Fairly okay, considering the number of pixels being powered on this big display, but a bigger battery like on the Note II would have helped.

The HTC Butterfly costs a lot of money. But, if you are after the very best Android phone in the market at the moment, this is the one to buy.

Nokia Lumia 820

Competent, but missing the pull factor

With the Lumia branding, you do expect a certain amount of finesse and class adorning the phone, and the 820's polycarbonate does feel like it is fairly good quality. While the back cover is replaceable, the plastic is a tad too hard and is coupled with a mediocre opening mechanism.

The 4.3-inch AMOLED display (480x800) is a tad too low, for a phone this expensive. The overall display quality is acceptable, but comes with only three brightness settings - low, medium and high.

Call quality is more than acceptable, and this is pretty much at par in terms of signal reception to the Lumia 900. The earpiece is soft, and while it is quite loud, you will feel the need for a little more volume

Price
₹27,559

if you are speaking on this while walking down a busy market alley.

The Nokia Lumia 820 comes with a removable battery rated at 1650mAh. It will last for a day and a half on regular use. The wireless charging option is available for Lumia 820, but the cover and pillow are optional purchases.

The 8MP camera is definitely an improvement over the Lumia 800 and the Lumia 900, in low light conditions. Pretty acceptable for day-time shots. But then again, Android phones in this price bracket offer better cameras - HTC One S and the Sony Xperia SL, for example.

The Lumia 820 does not have the pull factor, to make you want to spend ₹27,000 on it.
