Lenovo has named this IdeaPad, the Yoga for a reason – it offers flexibility that most ultrabooks cannot even dream of! The soft feel on the lid is something rare as the brushed metal look is more fashionable. The leather layer on the keyboard deck is quite unique. The keyboard is conducive to quick and precise typing, but the smaller shift key is something that will take some getting used to.

The IPS display sits on a solid hinge. Its resolution is lower than the full HD display on the Dell XPS 12, but you must consider this – an IPS display is better in terms of colour reproduction, viewing at angles and text rendering.

The Yoga 13 and the XPS 12 are neck and neck in terms of performance. The PC Mark 7 score of

Price
₹84,290

4862 for the Yoga 13 is slightly higher than the 4734 of the XPS 12. In terms of real world usage, the Yoga 13 feels slightly quicker than the XPS 12. Also, the Yoga 13 comes with lesser preloaded software than the XPS 12. The IdeaPad Yoga 13's battery is quite good. In high performance mode, it lasted for 329 minutes. This beats the previous best of 300 minutes by the Dell XPS 12.

If you want an ultrabook with a well-built flexible shell that offers versatility of use, then the Lenovo Yoga 13 is worth considering. Else, lesser priced conventional ultrabooks like the Spectre XT will offer similar performance.

ASUS F2A85-V PRO

Ideal for a high-end AMD gaming rig

When you consider the AMD FM2 platform and the Trinity based APU in that line up – the AMD A10-5800K – you will immediately think about a mid-range rig. But one look at the F2A85-V PRO and you will realise that ASUS have pulled out all the stops to make this board look as high end as an AMD FM2 platform can allow. There is a dedicated button called Direct Key which allows you to go to the UEFI BIOS directly, which can also be programmed to work with your cabinet's reset button. Ideal for those who need to constantly tinker with BIOS settings.

The F2A85 V PRO comes with exclusive ASUS features such as TurboV Processing unit (TPU) and Energy Processing unit (EPU), the former allows for performance tuning and the latter helps in

reducing power usage. We tested the board with AMD A10-5800K APU along with 8 GB of Kingston HyperX RAM. We got a multi-core score of 3.22 on Cinebench R11.5 and the APU gave an impressive 40FPS in *STALKER: Call of Pripyat* at 1280x1024, medium settings. Overclocking the APU was also quite easy thanks to the various options. We ran the system at a stable overclock of 4.3 GHz getting a 20 per cent boost in performance.

At ₹10,270 this may seem expensive when you consider an AMD mid-range rig. Only Gigabyte F2A85X-UP4 provides some competition although at a slightly higher price point. It all boils down to what features you are looking at as both boards are equally great for building an AMD gaming rig.
