Sony Vaio SVT13126CNS

The super quick SSD makes this a real clincher

Price
₹64,990

For a machine costing upwards of ₹60,000, the Vaio SVT13126 does sufficient work to ensure that it looks and feels premium. The use of metal for the most part is lending it that expensive feel. But the Vaio is considerably thicker than the HP Spectre XT, HP Envy 4 and the Samsung Series 5.

The 13.3-inch display has the resolution of 1366 x 768 pixels. Colour handling and text readability are impressive.

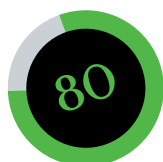

However, the reflective nature of the display is a bit of an issue in most usage scenarios.

The touchscreen experience is critical for a smooth Windows 8 experience, and that works well. Tight display hinge prevents the display from rocking back and forth when using the touchscreen.

The indications given by the numbers from all the system performance benchmark tests are proved correct by the smooth real world usage experience. The apps open very quickly, and that is actually because of a blazing fast solid-state storage. The ADATA AXMI4S3 128GB drive got the best performance score among all ultrabooks and laptops. This gives the Vaio a serious advantage over the rivals. In our heavy stress battery test, the battery on the Vaio T lasted 188 minutes. Essentially, three hours in the battery test easily translates into five hours in most real-life usage scenarios.

The Sony Vaio T13 is a fairly premium notebook which you can consider only if you really need the touchscreen. Otherwise, the HP Spectre XT is also worth checking out.

JBL Micro II

The unassuming little speaker!

Price
₹2,490

You can probably keep this on the palm of your hand and still have some real estate left. The 3.5mm jack means this can be daisy-chained with other Micro II speakers. This is a mono speaker with one 40mm driver, and no separate bass engine.

The Micro II offers noticeably superior vocal clarity, than even the much bigger Jabra Solemate, with a crisper, yet not shrill high end. For most music, the max usable volume level would be around 70 per cent before clarity reduces. Good enough for personal music use on the go.

JBL Micro Wireless

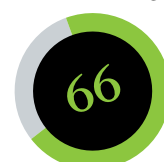

Tiny speaker packs in quite a bit

Price
₹3,490

For the looks, this is slightly redone from the Micro II, with a redesigned grille and an additional strip of chrome framing it. Despite the blue-tooth add-on, the size remains the same as the Micro II. For the bluetooth handshake, it connected easily with the iPod Touch. The range is quite good - around 15 ft in a straight line

The Micro Wireless handles vocals very well. Bass is missing, but the clarity at up to around 80 per cent volume level. We got the battery to last just a couple of minutes above four hours, which is good.
