

Google to cut illegal website funds

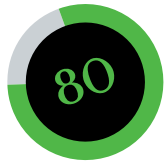

Google is in discussions with payment companies including Visa, MasterCard and PayPal to put illegal download websites out of existence by cutting off their funding. <http://dgit.in/WYyQJr>

Posterous shutting down

Posterous has announced shutting down its service after April 30. Users are encouraged to backup their data before that. <http://dgit.in/W5D5o3>

Google Nexus 4

The best stock Android experience around

The Nexus 4 is a gorgeous looking phone with a glass-based rear flap which has a bit of flex. Being Google's flagship phone, it doesn't have any preloaded skin giving users a pure Android 4.2 Jelly Bean experience.

The biggest advantage of owning a Nexus device is that you will be the first to receive the latest Android update. Since the device isn't sold with any carrier in the US, the price you pay for an unlocked Nexus 4 is a steal. The only disadvantage is that it isn't available off the store counter and needs to be purchased from the Google Play store or from an online Indian retailer sold at marked up prices.

Despite the amazing looks and the power under the hood, the device isn't perfect. It has an 8MP camera but it isn't the best when compared

Price
₹29,990
(16 GB model)

to its peers. There is no expandable storage option on the device. Also, devices such as the S III and the One X+ do bring a lot of cool features in addition to the custom UI over Android. If you like the extra bells and whistles, then this isn't a device for you. One problem we did face with the device is that after answering a call, there is two seconds of stagnant time before any of the two communicating can hear the other. The loudspeaker is very loud for calls and multimedia.

The display is great for media consumption and its quite responsive, especially while typing on the keyboard and web browsing. The battery of the device makes it through one day of average use. If importing the device from the US, this is the best Android smartphone.

Spice Stellar Pad MI1010

A great budget Jelly Bean tablet

The front has a 10.1-inch display and there's a plastic back with a smooth brush-metal finish, which feels really good and premium. The rear has a distinct curve i.e., it is slimmer at the top where the camera rests and is slightly thicker at the bottom. The tablet feels slightly heavy at 667 gm and isn't the slimmest at 10mm thickness.

The 10-inch screen has a resolution of 1280x800 giving it a pixel density of 149.95. This isn't the best but is good enough. Reading text, browsing the Internet, playing games, all looks great on the screen. And the viewing angles of the screen are good. For the entire duration of using the tablet, we had the brightness cranked up to full. The audio from the on-board speakers too is very loud.

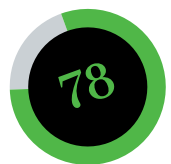

Price
₹12,990

The battery on the device lasted us for 6.5-hours in our continuous video playback test, and its battery performance is better than some other tablets.

If you are looking for a great Android 4.1 Jelly Bean tablet with a 10-inch screen then you can pick up the Spice Stellar Pad. It has good power under the hood, has an impressive display and touch response and the audio from the device is really good. Sure, it is plagued with some lag issues and apps do crash once in a while, but that is the case with all budget tablets. We have finally found a great budget Jelly Bean tablet. But if a smaller display is what you require, then there are better options available in the market such as the iberry Auxus CoreX2 3G tablet.
