

Surface Pro “unrepairable”

iFixit gave the Microsoft's laptop-tablet hybrid a rock bottom score of 1 out of 10 for repairability, lower than the iPad. <http://dgit.in/13pLWPl>

PS 1.0 source code out

The Computer History Museum has made available the original source code for Photoshop 1.0. <http://dgit.in/VRanHI>

Sony-NEX-VG900

Camcorder goes Full Frame

The Sony NEX VG900 is a camcorder that packs a 24.3 megapixel full frame

sensor, the same found in the Alpha-99 and the RX-1. It also comes with integrated Quad Capsule Spatial Array 5.1ch surround microphone, which allows true 5.1 surround sound recording.

For starters, the lens mount on the camcorder isn't an A mount, but an E-mount, the one used on Sony's mirrorless camera range. Sony provides an A-mount-to-E-mount adapter, but using that disables AF. We can't figure out why Sony would go for an E-mount on this camcorder, instead of an A-mount, given that Sony has far more lenses in the latter category than the former. Using lenses attached to the adapter increases the length of the entire unit quite significantly

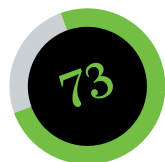

Price
₹1,79,990
(body only)

and given how light the VG900's body is, using heavy lenses on it makes it a very uncomfortable setup that tends to tip forwards with quite a lot of weight. Holding the camera either through the strap built onto the body or the handle on top is of no use as the weight distribution is incredibly uneven.

As far as the quality goes, the only advantage a full frame sensor delivers is bigger pixel pitch by virtue of its size. That means better colours and most definitely a far better dynamic range than what standard camcorders deliver. But if you compare it with the quality delivered by full-frame DSLRs, it sort of just “blends in.” The audio though is of surprisingly good quality, as we recorded sound in both stereo and 5.1 modes (with the wind filter enabled) and found the spoken words to be clearly audible despite filming through mild winds.

If you are hell bent on getting a camcorder, the VG900 is just as good as any high end full frame DSLR. The single biggest advantage is, that it includes all the controls of a professional video camera such as dedicated buttons for Iris and Gain control etc.

Cooler Master Hyper TX3 EVO

Cheap but efficient !

Price
₹1,500

The CM Hyper TX3 EVO has a new 92mm, PWM controlled, pre-mounted fan and comes with mounts for one more fan. Smaller than higher end air coolers which makes it easier to fit in most cabinets. Installing it is easy as it eliminates the use of pesky backplates altogether. Performance wise, the Hyper TX3 EVO doesn't disappoint; it was able to keep our Intel Core-i5 2500k at 32 deg C when idle and at 49 deg C under full load. Not meant for overclockers but it performs better than what its price tag suggests.

Lenovo S560

Android smartphone with good music performance

Price
₹14,999

The Lenovo S560 has a good display, fantastic audio and is overall a good phone. A lackluster skin and the average camera go against it. A music buff may consider this phone just for the Dolby Sound, which enhances the audio experience. Around the ₹15,000 price point, there are a lot of devices available. If you are ready to take the risk, we say give this device a shot. It's a good budget Android phone. But you may want to consider the safer Sony Xperia Go, Xperia Sola, or the Samsung Galaxy S Duos for the same price.
