We take you through all the news that made waves in the month that has gone by

**Weather forecasts on FB**

Facebook pages will now have weather forecasts on posts about event pages or for public places like parks and cities. <http://dgit.in/Ykz8NT>

✉ Hello everyone at Team Digit. I've been reading Digit since 4 years and this is my first letter to you. I'm a 13 year-old die-hard fan of your magazine. I never miss a single issue. Earlier I used to purchase it only for the games provided on the DVDs and for the game reviews but now I read every single word of your magazine, and I proudly say that Digit is my technology navigator. You guys are doing a great job. A friend and I are creating a website called Programmers Hub, which will have tutorials on 5-6 programming languages. It would be great if you could check it out.

Gaurav Yashvardhan

4 It's great to see initiatives from our youth. We will check it out and give you feedback soon.

Robert

✉ I've really liked this initiative which Digit has undertaken! I don't need to look up the web for a reliable source of information! It's very convenient and I don't have to bother about its correctness! Really great effort! Keep up the good work! By the way, when is volume II of the Technology Encyclopedia coming? Really waiting for that!

Yogesh Lather

4 We're waiting for a special issue to provide it. It should be out within the next 3 months.

Robert

✉ I've been a fan of your magazine since 2006. My first encounter with this astonishing technical navigator ('DI-G' as we call it in our group) was at my elder brother's residence in 2006. I borrowed all the previous issues he had which he enjoyed reading as well as playing with the tools provided. Since then, I've tried to grab all the editions as far as possible. 'As far as possible', because my profession, remote location, non-connectivity to main land etc. creates extreme hurdles to reach my 'DI-G'.

While I was at one of remote locations, the IT departments of my station couldn't succeed in operating the external CD writer and flatbed scanner (both supporting USB 2.0), since Win XP was

Feedback for the March 2013 issue of Digit

supporting USB 1.0 only. I provided them with Service Pack 2 of XP (of course through your mag only) but they couldn't integrate it. The next month's issue carried the article "How to integrate SP2". I followed the instructions, got it integrated and our gadgets started functioning. I was applauded for the same. Though I knew who the actual owner of this honor is. Listening to me say all this after 5-6 years may be worthless to all of you gurus, but I wish to convey a huge thanks from the bottom of my heart to 'DI-G' and the entire team behind it. I would also like to express my sincere gratitude to the editorial team, who are managing every article, QA, Agent 001, comparisons and tests.

Even today I'm stationed at a remote location (placed at one of the islands in our country) but still catching a copy every month (though air surcharge makes it costlier). To get a copy of this month's 'DI-G', I have to cough up ₹275 on a book price of ₹200 and wait for a longer period (Grabbed my copy on 17th March, though I visited the vendor since 10th of month and the vendor confirmed its arrival on-date).

One complaint – this is second time that the DVD provided with the magazine doesn't work (Alpha only, Omega runs). It has happened earlier also. You'll appreciate that it's not only a cost issue but also for a person like me who has become

'DI-G' habitual, it feels awful when such a thing occurs. Some remedies must be taken to resolve this problem.

Sarvejit Kumar Singh

4 Thank you for your kind words and sharing your story. Readers who find a DVD to be non-functioning can write to help@thinkdigit.com and we will send you a replacement.

Robert

✉ I find that typos in a publication disconcertingly resemble bugs in a program. The first few are annoying, then it turns into a routine. Some are downright hilarious, and occasionally, very occasionally, one spawns the seed of inspiration. I blazed through the magazine (epic work, by the way), sometimes stopping along the way to look at an interesting review or article in detail. Some typos jumped out of the page. My favorite part was when I laughed for 15 minutes on seeing "they" spelled as "tehy". I liked the main article on tech and education, and as a student exposed to the bumbling attempts at introducing tech into the teaching process, I felt that student attitude is the first thing that needs to be changed. I've seen a year full of interactive classes where most students were content to snicker at the back of the class, so if the kids aren't interested in using the tech, it's a moot point.
