Google Keep launched

Google launched its new note taking service called "Google Keep" on the web and also on the Android platform. <http://dgit.in/YHHIPS>

Videocon VT 10

A good-looking budget Jelly Bean tablet

For a 10k tablet, the Videocon VT10 has a really good build. It has a slightly curved back adding to the comfort and grip. The rear of the tablet also has a gunmetal finish, which makes it look premium.

The Android experience on the tablet is fairly vanilla. From the lock screen, you have access to unlocking the device, Google Now and accessing the camera. Once unlocked, you have access to the standard five home screens to customize with apps and widgets. There are the back, home and multitasking buttons on the bottom left of the touchscreen along with the touch volume controls. These controls are

Price
₹11,200

there in addition to the physical volume rocker.

The IPS display of the tablet is great in terms of viewing angles and the representation of colour. The keyboard is good to type on and apps and games ran smoothly on it. The only downside to the display is that the touch response at times felt a bit off and we had to tap a few times to get the device to respond.

In our continuous video playback test, the tablet lasted for a little over 6 hours and that is quite good. Transferring data from your Mac or PC to the device is as simple as plug, copy and paste.

We have seen the launch of quite a few Jelly Bean powered tablets in the past, the Spice Stellar Pad was one that caught our eye with its performance. The specifications of the Videocon VT 10 are quite similar to the Stellar Pad. Where the VT10 is better is in its build. If a 10-inch tablet is on your horizon, you can definitely add the VT10 to your consideration list. It has good power under the hood and the performance is acceptable with the only drawback being the occasional hiccup in the performance of the touchscreen.

Sony CP-F1LSA

Higher capacity portable charger priced high as well

Price
₹3,000

The Sony CP-F1LSA is priced at ₹3,000 for the 3500mAh capacity battery. When compared to the Nokia DC-16 which offers a 2200mAh at ₹1499, the pricing is on the higher side. If you are a power user and always end up with a dead battery while in transit, this high capacity charger is a great buy. It took us three hours to charge our cellphone which has a 2800mAh battery from no charge to full charge. We liked its rate of charging, but the battery self-charging took a good 5 hours from no charge to full charge. The decision to buy this or not depends on your smartphone battery capacity. If you want an economical option, the Nokia DC-16 provides good value for money.

Circle Ballistic

Nice design, Fully customisable!

Price
₹3,999

Partly called the Ballistic, this keyboard has a gun-like design element to it with a handle at the left and a swivelling compartment cover to the right which hides a USB port and SD card slots. There is a sliding, removable, gun-scope like keypad which provides additional G-keys. A volume knob resides at the right which is backlit and works well. An extra group of five macro keys have been provided to the left of which you have dual functions. A Windows key on/off button helps to prevent accidental key presses while gaming. The included software is user friendly allowing for complete customisation. At the price it seems a decent deal.
