

Cloud for NVIDIA ?

NVIDIA's recently released roadmap shows it might introduce its first Cloud Server System which NVIDIA calls as the Grid Visual Computing Appliance

Plex vs. XBMC

Check out a comparison between two heavyweights amongst free media players or media center applications here: <http://dgit.in/YoHhyO>

Seagate Wireless Plus 1 TB

Extend your mobile storage

Seagate Wireless Plus is an external portable hard drive which can be wirelessly connected to your smartphones or tablets or DLNA compatible devices. You can then stream videos, photos, music from the Wireless Plus drive to those devices in effect increasing your mobile storage.

The Seagate Wireless Plus houses a 1 TB internal HDD with effectively 931GB for use. The interface is similar to the one we have seen on GoFlex drives with a SATA to USB 3.0 adapter. You will need to download the Seagate Media app from the iOS or Google Play Store onto your smartphone or tablet. The Wireless Plus forms its own Wi-Fi hotspot and you will need to connect to the Seagate drive's wireless network to access content on the drive. The drive will even let you connect via an internet connected Wi-Fi

Price
₹16,000

network rather than disconnect you. Mastering the Seagate media app doesn't take much time.

It gave higher speeds than the Seagate GoFlex 1TB drive and similar speeds to the Seagate Backup Plus 1TB drive. Sequential and Assorted Write speeds were 106.67 and 88.38 MB/s respectively whereas Sequential and Assorted Read speeds were 107.87 and 98 MB/s respectively.

Streaming was flawless provided you are in the same room as the Wireless Plus. SD content can easily be accessed by over three devices, but with 720p and 1080p content, the same file can only be streamed simultaneously to two devices. Connecting more devices bring down the battery life. The Seagate Wireless Plus boasts of a 10-hour battery life, but in our testing it lasted for 5.5 hours while playing full HD content.

Great for content creators, travelling professionals and those who want their entire media collection with them at all times. At ₹16,000 it is priced at a premium and surely not meant for everybody.

Norton 360 Multi-device

Complete protection, at a price.

Price:
₹3,499
(1 year/3 devices)

This suite is one of the most feature-packed that we've come across. It features almost every single feature that you would expect from an AV suite, as you can see in the specifications. The inclusion of the 27GB of online storage for backup is a very nice addition. The interface is zippy and the system impact also seems to be low. The internet security tools seem to be pretty good, malicious web-sites were instantly blocked, but we didn't like the toolbar that the suite automatically installs in IE. Of course, the toolbar can be disabled and who really does use IE? This is a very good suite but comes at a high price.

MapmyIndia Lx340 navigator

Premium navigation quality, affordable price

Price
₹8,990

Not many navigators have been able to come close to the Zx250 that we tested last year. Now, the Lx340 brings in a lot of that goodness, at an affordable price point. Not the complete AURA package, but the Lx340 has possibly the best 3D Maps in this price bracket. Signal lock, under direct line of sight with the sky takes 10-12 seconds. Battery life is good enough to get you through a 50km journey on a single charge. The only niggle is the slightly reflective 4.3-inch display. A device worth considering, if you need to buy a navigator.
