

Why did Andy Rubin quit?

After a decade at the helm of Android, Rubin recently put in his papers. Here's an in-depth look at the fallout: <http://dgit.in/14hK8Ne>

Gif making, like a boss

The verge has an entire article dedicated to creating the perfect gif. From basics to going pro. Check it out here: <http://dgit.in/11sLhAN>

Headphones suggestion

As we all know, mobile phones come with very mediocre pair of headphones. I was thinking of buying Skullcandy Skullcrushers. I read a review where it was written that Skullcrushers is just okay. Turning on the bass switch only increases random noise rather than pure bass.

Though I have done some research on good brands, now I'm stuck between the choices: Skullcandy, Sennheiser, Denon and Koss. My preferences include heavy bass, circumaural headphones with crisp highs and lows. My budget is between ₹3,000 and ₹5,000. Currently, I'm using Tekfusion Twinwoofers in-ear headphones and I'm pretty happy with its performance. But since I have the Note 2 now, I'm thinking of getting better headphones as well.

Yusuf Goriawala

A The Skullcrushers don't come recommended for good reason. The bass boost is more like a gimmick; all it does is add vibration similar to what we have on game controllers in the form of force feedback. Since you seem like a basshead, you should definitely go for the Koss PortaPro. They seem to fit all your criteria except that they're supra-aural. Also they're a little difficult to procure, but if you do find a pair you won't be sorry. You may also want to check out our Headphones Comparison test this month which has many brands and variety from which you can choose.

Laser or Inkjet printer?

I need to purchase a multi-function printer which would cover some basics such as good quality, fast prints, good scan quality, and have economical operation costs. I understand that it is difficult to incorporate all the above mentioned features in one MFD. Hence, I would be happy if most of these are covered. My maximum budget is ₹5,000. However, I wouldn't mind raising the same by upto ₹2,000 if I get a decent buy.

I've zeroed in on the following choices:

- 1) Canon MP 287,
- 2) Canon MG 2270,
- 3) Canon MP237
- 4) HP 1050,
- 5) Brother DCP 7055,
- 6) HP 2515,
- 7) HP 3515,
- 8) Epson Me-101

The list is exhaustive but you, being the experts in your field, can help me zero in on the best. Also, kindly suggest whether laserjet or inkjet would be more suitable for a medium type of printing/scanning.

Rasesh Bhagwati

A Considering that your printer usage will be medium, we suggest opting for an inkjet printer as laser printers can get expensive, unless you're going for the monochrome laser printers.

Before we make any suggestions, you should keep in mind that when you want to buy a printer, you should never ever just look at the price of the printer. Always check out the cost of inkjet cartridge which goes into that printer. Looking at your options, the Canon printers although priced less, have a high cost for the cartridges. So if you

exhaust your bundled cartridges, you'll have to shell out over ₹2,000 to get a brand new black and colour cartridge set. Epson Me 101 is equally expensive as it has four cartridges and although the print quality on both Canon and Epson is great, their overall cost of ownership is high. HP printers, on the other hand, have very affordable cartridge costs starting from ₹449 per cartridge. The printing volume is also respectable. Among the HP all-in-ones you've mentioned and keeping your budget in mind, the HP Ink Advantage 2515 makes for a decent buy.

Which point and shoot?

I want to purchase a point and shoot camera. I am confused between the Sony DSC-H200 and Sony WX-150/L. Please suggest which of the two would be a better purchase.

Hanan Bin Manzoor

A The two cameras you've chosen cater to different needs. For instance, the Sony DSC-H200 is an ultra-zoom whereas the DSC-WX150 is a compact travel zoom. Both serve different needs.

If you want a compact camera, which can fit into your pockets, then the choice is a no-brainer. The WX150 makes for a

decent buy. It has a very good sensor – the backside illuminated CMOS sensor will perform better under low light conditions as compared to the CCD sensor on the H200. The WX150 also shoots 1080p videos whereas the H200 does 720p.

The only advantage Sony DSC-H200 has over WX150 is the presence of 26x optical zoom whereas the WX150 has only 10x. The other advantage is that the H200 uses 4x AA batteries as opposed to the Lithium-ion battery used in the WX150, so in emergency situations when your battery runs out of juice, you can get four Duracell batteries and continue shooting. With the WX150, you'll have to carry an extra battery pack if you plan to shoot for longer durations. The WX150 is selling for around ₹12,700 whereas the DSC-H200 sells for ₹13,700.

If excessive zoom is not your priority, we suggest opting for the WX150. If you want good zoom, don't mind a slightly hefty body and would want to explore complete manual functionality as well, opt for a Canon SX160 which comes for around ₹12,600 as well. **4**
