SKOAR

Rampaging Gods and locust hordes are just begging for a taste of death. Did they die well?

The most iconic Hollywood weapons

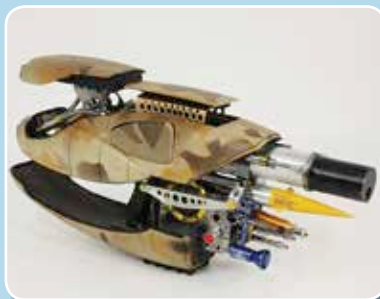

Movies not only feature some of the most unusual and unique weapons ever seen, but they can also take some of the most mundane weapons and make them unforgettable masterpieces of destruction. Here is our pick of some of the most awesome weapons in movies.

**BlasTech A295 blaster**

This is one of those weapons that is exceedingly impractical but exceedingly cool at the same time. A weapon with a very low rate of fire, with "projectiles" that are visible in broad daylight and to top it off, will cauterise a wound after making it, is utterly useless for war. Regardless, Star Wars just wouldn't be the same without this weapon.

Zorg ZF-1

This weapon wasn't used for more than a few minutes in the movie (5th Element), but as an all-rounder, it just cannot be beaten. Combining an assault rifle with the "replay" system, a flame-thrower, a dart-gun, a net, the so-called "ice-cube" system and more importantly, a self-destruct button, this is one hell of a weapon.

**Chuck Norris**

Chuck Norris is not a weapon. Chuck Norris is everything that ever was or ever will be. He is the ultimate expression of everything, a entity that was born in the cabin that it built with its bare hands, one that can cut a hot knife with butter, a creature that can make a happy meal cry. This man knows why a duck's quack doesn't echo and will not tell you why.

**Noisy Cricket**

A diminutive weapon that can blow a hole the size of a bull clear through 5ft of concrete and send you flying back by about 20 feet due to the sheer power of its recoil earns it a place on this prestigious page. Such a powerful, but unusually small weapon must have been wielded by a T-Rex style alien; massive, with tiny hands.

The Hanzo Katana

Designed by master-craftsman, Hattori Hanzo, the Katana wielded by Black Mamba is one of the most lethal weapons ever created. Elegant and dangerous, its exquisite beauty is only matched by its extreme lethality; capable of slicing a human in half with the same thoughtless ease with which you'd slice a tomato with a meat cleaver.

**A Pencil**

The pencil is no more the humble sketching and note-taking device that it once was. The Joker changed its fate forever when he sent it plunging into the depths of a hapless henchman's skull (straight into the occipital lobe). Have you ever tried driving a pencil into your table with your bare hands? It's not as easy as it looks.
