Im thinking of updating my pc..my current specs are 2gb ram,200 something harddrive, nvidia 8400 GS 512 mb, intel pentium dualcore E5300 2.60 ghz.....i plan on getting a zotac nvidia geforce GT 610 2gb, an intel i3-540 3.06 Ghz, and a 4 GB ram from flipkart..will it be enough to run games for at least next year and a half?? My budget is max. Rs 11,000..im hoping that ill be able to "run" AC3, FC3, darksouls 2 and other new releases with medium settings or something...any suggestions would be helpful..if u think that i can get something better than the things that i mentioned within the budget, please tell...sorry for the long post..its just that i wanna be sure of what i should buy..thnx :->

Palash Sharma Instead get an AMD A10 from your local store at around 7.5K rs and A mobo at 3-4K. It surely will perform better than i3+610 combo.

Hello friends,
I want to buy a good LED monitor with a screen resolution of minimum 1600 x 900 pixels. Screen size should be a maximum of 20 inches. My budget is around Rs. 6000.
I have found these 2 models from Flipkart:

> Philips V-line 206V3LSB28 20 inch LED Monitor

hey guys im planning to take a bsnl broadband connection. What things should i keep in mind and what things should i ask for? Also recommend a suitable plan for me, i am a mmorpg fanatic so ill be spending lot of time on net and also downloading big files but i still want it to be cheap. So please recommend a 3g plan for me.

Ardhya Bhatt Yes you can opt for the 3G plan or broadband connection no worries in that. But wait. What if you want to use your same 3G net on multiple devices? Say cellphone? Laptop, Tablets, TV, PSP, or more? then what will you do ...buy different sim cards for different devices? Well thats where i bought this <http://www.micromaxinfo.com/datacard-display.aspx?datacardcategory=router&datacardid=mmx%20400r>

Ardhya Bhatt Its a pocketable 3G, Battery backed up Router. That creates your 3G signals into Wifi. You can connect almost 5 Devices with this router and it gives USB tethering option also. Also, its universal so you can put in any sim you want plus it has a removable battery like any cellphone. It gives a charge for upto 5 hours.

Ardhya Bhatt Totally wireless. And 3G speeds. Price around 2.3k Rs but its totally worth it. As you can take your wifi just anywhere with you.. Work, Home, College, Anywhere and use internet on your device

Ardhya Bhatt but obviously he will get lesser speeds (750 kbps) ..and also a wired connection. He cant take it anywhere...and if he belongs to an area where powercuts are frequent, a battery backed up internet will be beneficial.
