

Apollo 11 news

Amazon founder Jeff Bezos who discovered debris of five Apollo 11 engines in the Atlantic Ocean pulled out two of them recently. More here: <http://dgit.in/Y63ZeC>

Ridiculous Fishing

This new iOS game involves dropping a hook to catch as many fish as the hook can lift and then shooting them from your gun. <http://dgit.in/ZJySEw>

LETTER OF THE MONTH

☒ Hope my subject line (I want to sue you) has grabbed your attention. (I just took a writing skills class).

Yes, it's true. I am suing you. You have ruined my life by getting the new series "dGt" out. To begin with, I've been an ardent fan and subscriber of Digit. My mom still curses me for blocking an entire almirah with all of my Digit magazines, CDs, DVDs and Fast Tracks. I started my tech passion with Digit, and it was/is my first tech love.

Now you've brought dGt into my life. I have loads of RSS feeds pushing new technology into my inbox, but I think dGt surpasses them. I can't

stop drooling looking at all the gadgets. I'll soon turn bankrupt if I keep reading your dGt, hence the lawsuit :-)

Here's my written affidavit that I will never ever unsubscribe my Digit subscription, provided you keep dGt running. Just kidding, I can't betray my first love.

Dheeraj Poojari

☒ Thanks to hundreds of letters like yours, we've made dgt (dGt?) a permanent feature of the package now. We will need feedback on a regular basis to improve it,

so we certainly hope you and the others will continue writing.

Robert

Anyway, coming back to the typos, in the very interesting Icons of Trust feature, in the chart of all places, "External Storage" morphed into "External Storagel". This particular typo was quite piquant, sparking off an internet search on my behalf. The idea of storing data or – more specifically as my mind zoomed into overdrive – gel-based HDD, RAM, GPU's and so on, such as cooling would no longer be an issue. The net search yielded quite a few possibilities, perhaps my daydream will one day distill into real life. I highly recommend a similar search, as a bit of extra hope and dreams is never amiss...

Vivek Mahapatra

☒ Sorry, most of the "tehy" style typos that usually happen are completely my fault. I have this annoying habit of going through a random article at the last minute (before going to print) and changing a line or two. Sadly I also typo often because my fingers just refuse to move as fast and as fluidly as I expect. I will be more careful in the future. We could use your brand of creativity and writing skills, let us know if you want to take a shot at writing for us! How about an article on "Storagel"? :-)

Robert

☒ It has been 6 years now, or rather just a few issues shy of 7 since I started reading Digit, during which period I have many times contemplated writing to you guys, but was always regrettably held back by indolence and other worldly charms. Thus, this is a long overdue letter; hopefully, I'll be writing to you more often after this.

I still remember how I, a mere tenth grader at that time, considered myself to be quite erudite in computers before starting to read Digit. It was quite shocking and exhilarating at the same time to find out that there still existed so much more knowledge that I could acquire. I was hooked on Digit from the very first issue (June special) that I read, and I can proudly say now that I haven't missed even a single issue since then. Though I must confess I can't say the same for every article – the interviews of notable personalities not being one of my favourite parts. Since joining Engineering, the frequent train journeys of a few hours have also made Digit an indispensable comrade. The journeys now appear too short when I can't finish the whole magazine in a single sitting!

The magazine has undergone quite a few changes since I began reading, and the additions have all certainly helped to make it even better. Buzz, Mobile Watch, Tips & Tricks, Game Reviews, Bazaar, the features and, of course, the tests are all my favourite

sections; although I should say that the current method of writing the Test articles for mobiles is not quite as efficacious as the one you used to employ previously, where you wrote about each mobile separately and then gave the verdict at the end. That method of structuring was more organized and easily accessible, and provided all the opinion (and not just the stats) about a mobile at one place, eliminating the need to look back and forth for every mobile that you may be interested in.

The DVDs, inspite of high-speed broadband that's now commonplace, are still relevant. The study material, games, movie trailers, TED videos and the essentials are all very nice. However, I would suggest providing all the videos at 1080p (at least 720p), and should be allowed much more space on the disk if needed. The interface of the DVD too, although it is quite nice and does the job well, could probably use a slightly bigger font and thumbnails.

dgt was a nice little addition this time, and I hope it turns out to be as envisioned. The articles about the mobiles and laptops inside it, however, were better off within the magazine according to my humble opinion. dgt should concentrate on the various technological innovations that are, or could become a part of our lifestyle, and which we're largely ignorant of, or which are not given much exposure in the magazine.

I do have a little complaint about the March issue though. The lack of a glossy cover page on the magazine, while the little dgt was adorned with one, just didn't feel right. I believe a magazine's cover has to be glossy, smooth to touch and glimmer in light!

Areeb Khan

☒ In truth, only some of the magazines we printed had a matte cover. We had some cover paper left over that we didn't want to waste. I actually prefer the matte cover, to be honest – the colours print and look better. Videos in the DVD are usually provided in the highest quality we can fit and find. There is a small overlap between dgt and Digit, but the clear focus of dgt is lifestyle. As for the comparison tests, we decide that based on number of phones. If there are too many to carry we do them category-wise.

Robert
