Samsung Galaxy S4, XOLO X1000, Xperia Z and many more launches

The past month saw some major reveals at MWC 2013 as well as India launches, ranging from the highly-anticipated Samsung Galaxy S4 to the first Firefox OS phones

Samsung Galaxy S4 finally revealed

The Samsung Galaxy S IV, or to be precise, the Galaxy S4, was finally revealed at Samsung's March 14 event. The company says that the Android 4.2.2 Jelly Bean phone will be rolled out in 155 countries starting April 2013.

Samsung has clarified that the international version of the Samsung Galaxy S4 will be powered by the Exynos 5 Octa chipset. This particular chipset has

its quad-core Krait 300 chipset and the Adreno 320 graphics. Both versions will have 2GB of RAM, and will get the LTE feature in certain markets. It will also feature wireless charging in some markets.

The Galaxy S4 features a 4.99-inch 1920x1080 pixel Super AMOLED display, giving it a pixel density of 441 ppi. There will be three storage options - 16GB, 32GB and 64GB. The Galaxy S4, at 7.9mm, is actually thinner than the Galaxy S3, despite a bigger display, with a less profound bezel. The rest of the specs include a 13MP rear camera, a 2MP front camera, NFC, 4G in certain markets and a 2,600mAh battery.

The Galaxy S4 has also been stuffed with exclusive software features including camera additions such as Sound and Shot and Drama Shot, as well as new TouchWiz interface features such as Smart Pause, Smart Scroll, Group Play, S Translator, Air View, Air Gesture, S Voice Drive and S Health. Intel-based 2 GHz Xolo X1000 launched

XOLO launched the new X1000 Android-based smartphone at a press event in Goa. This becomes the third addition to the family of Intel-based phones from XOLO, after the X500 and X900. The XOLO X1000 has

Intel XOLO X1000

been priced at ₹19,999 for the Indian market, and hit store shelves on March 21.

The XOLO X1000 runs on a single-core 2GHz Intel Atom Z2480 processor (based on the Medfield design) with Hyper-Threading (implying two threads) and a PowerVR SGX540 (400MHz) GPU, coupled with 1GB of RAM. It also boasts of a Sharp-made 4.7-inch 1280x720 pixel '2.5D' edge-to-edge curved glass TFT LCD display. The display has a reported pixel density of 312 ppi.

Other specifications include an 8MP rear camera with a 15fps burst mode. A front-facing 1.3MP camera is also on board. The rear camera can also shoot full HD video at 30 frames per second. In terms of storage, the X1000 offers 8GB of onboard storage,

along with a microSD card slot for expansion (up to 32GB). It has a 1,900mAh battery that is rated to deliver 9.5 hours of talk time and 14 days of standby time.

The Xolo X1000 will run Android 4.0 ICS out of the box, which is disappointing on various counts. Withholding the Jelly Bean update from the X1000 is bound to not sit well with several buyers. The company has said that it will provide the update by the end of the year.

Sony Xperia Z launched, Xperia SP and L announced

The Sony Xperia Z, the latest flagship Android phone from the Japanese phone manufacturer, was launched in India on March 6, at ₹38,990. The Xperia Z wasn't the only phone launched by Sony at the event. The Xperia ZL, a slightly less expensive Android smartphone, was also revealed.

The Xperia Z is an Android Jelly Bean smartphone with a 5-inch 1080p HD display with a pixel density of 441 ppi (pixels per inch). The Xperia Z is powered by a quad-core 1.5GHz Qualcomm Krait processor, 2GB of RAM, an Adreno 320 GPU and a 2330mAh battery. Imaging is handled by a 13.1MP camera that's also capable of shooting 1080p videos. The Xperia Z supports microSD cards up to 32GB and comes with 16GB of internal storage space. The Xperia Z is also IP57 certified as dust and water resistant.

Samsung Galaxy S4

four Cortex-A15 cores clocking to a maximum of 1.6GHz and four Cortex-A7 cores clocking up to 1.2GHz. The graphics are handled by the PowerVR SGX 544MP3 chip. But, there will be a second version that will only hit certain markets, powered by the recently launched Qualcomm Snapdragon 600 chipset with
