

### Star Wars theme park

Disneyland is apparently surveying its visitors about the prospect of a Star Wars theme park. <http://dgit.in/ZZyY8U>

### LG smart watch?

LG is reportedly planning to make an Android smart watch. Check out how they plan to do it. <http://dgit.in/14hhFqX>

## Google Glass

Google's much-anticipated foray into wearable tech will finally be available for the general public towards the end of this year. Google Glass is an augmented reality head-mounted display that nestles like a pair of spectacle would on a user's ears, eyes and nose. Running on Android, Google Glass comes with a GPS and can connect to a smartphone through Bluetooth, it can also take HD 720p video and photos on its own. The device is completely voice-controlled, requiring you to utter "OK Glass" before a specific command. The device is priced at US \$1,500 and is only available for "bold, creative individuals" right now.

# Gadgets and gizmos that will enrich our digital lives sooner than you think

## OUYA

This began life as a Kickstarter project and quickly mushroomed into the next big thing in video gaming.

A 3-inch cube, the OUYA is a video game console that runs on Android 4.1 Jelly Bean, sports a 1.7GHz quad-core ARM chip based on NVIDIA Tegra 3, 1GB RAM, NVIDIA ULP GeForce graphics, and 8GB internal memory. It has a host of connectivity ports, including HDMI 1080p for display and its very own wireless controller. It retails for US \$99 in June later this year, with a strong lineup of gaming titles. There's so much flux in the video game console market right now that it won't be surprising if the OUYA becomes a hit, seeing how it has a six-month head start to Sony and Microsoft's next-gen consoles.
