

IsoHunt loses appeal

The famous torrent site - IsoHunt has lost its appeal against Hollywood movie studios. The appeal was to remove keyword filters from its search. <http://digit.in/10siZ6Z>

A low end iPhone

Apple is reportedly planning to launch a low-end iPhone without Retina display in 2013. <http://digit.in/XvckVo>

Moneual Touch Table PC MTT300

A product not only corporate boardrooms but also gourmet restaurants and luxury lounges. It's basically a touch-screen PC built into a table – the product sports an Intel Atom D2700 processor, NVIDIA GF119 graphics, 2GB RAM, a 128GB SSD, Ethernet and Wi-Fi, running on Windows 7. The MTT300 has a 22-inch multitouch screen that can be used for interactive gestures and whatnot, the possible applications are quite mind-boggling. The MTT300 not only has a large-screen touch-enabled display that can be your table-top, but it also has USB ports, microphone and headphone jacks at the side – away from coffee spills. What're the odds that you'll see one of these in a restaurant near your house in the coming months? It might take awhile, but it will be worth the wait.

Oculus rift

It's a classic case of science-fiction inspiring real-world science to engineer a technological breakthrough. Spawn from a successful Kickstarter project, the Oculus Rift is a virtual reality headset that takes your in-game immersion to a whole new level. Apart from taking 3D gaming to the next step, the Rift lets you virtually inhabit a game environment unlike any other device. Think of airline pilots honing their flight skills in a state-of-the-art virtual reality simulator – the Oculus Rift is something similar for video games of the near future. It can plug into a PC or a dedicated console, according to prototypes revealed last month.

Hiriko

Imagine an uber-cool version of the TATA Nano that could fold itself, and you wouldn't be too far away from picturing the Hiriko. Measuring less than 100 inches and meant only as a two-seater, the Hiriko is being hailed as the ideal urban car of the near future, which can fold and park itself in tiny, cramped spaces. Being an electric car, the 500-kg Hiriko's range is limited up to 120-km before a recharge, but that's more than enough for one's daily urban commute. What's more, the Hiriko is the first commercial implementation of the CityCar project developed by MIT Media Lab since 2003. If you covet this marvelous European automobile, you'll have to wait till next year and be ready to shell out Rs. 9 lakh (plus import duties).
