Spam is irritating, contagious, and in some cases even harmful. There is no room for it in our lives other than causing distraction and wasting time. When it comes to business, as cliched as it may sound, time is money. To reduce any precious second of it being wasted on spam spawning from our increasingly online activity and digitally dependent lives is important.

Having said that, spam is notoriously difficult to evade. It cannot be stopped completely, however hard we try. But

there are ways and means to minimize its impact. In our collective fight against digital spam at the workplace – and generally in our connected lives – we outline few steps that can go a long way in keeping that all intrusive spam at bay.

Stop spam SMSes, calls

Unsolicited calls from telemarketers are almost always more irritating than useful. To their credit, the government's leading telecom authority TRAI (Telecom Regulatory Authority of India) has enforced telecom providers in the country to setup and maintain a Do Not Disturb registry – officially known as National Do Not

Call Registry. You can add your number to that list by simply texting START 0 to 1909 to block all types of telemarketing calls. But if you want to allow calls from certain areas of interest, TRAI allows you to apply a custom calling block by sending a text message "START X" to 1909, where X is any one of the following options represented by their numbers -- Banking/Insurance/Financial Products/ Credit Cards-1, Real Estate-2, Education-3, Health-4, Consumer goods and automobiles-5, Communication/Broadcasting/Entertainment/IT-6, Tourism-7.

Having tackled this menace, check out free third-party apps like Call Control -
