Kinect code samples open sourced

In an effort to promote the Kinect platform for its game controller, Microsoft has released around 22 code samples under an open source license to help developers get up to speed with developing games that support the Kinect controller on PCs. The samples include code that involves face tracking, gestures and other things that were previ-

ously hidden or were difficult and ambiguous to program. The code, which includes samples in languages like C#, C++ and Visual Basic has been uploaded under the Kinect for Windows project at <http://kinectforwindows.codeplex.com> and is available with the Apache 2.0 open source licence so that anyone can reuse and utilise the code in

their projects. Each sample is focused on demonstrating a particular functionality.

The minimum requirements include Visual Studio 2010 or 2012 and .NET framework 4.0 or 4.5 respectively. Additionally developers will also need to download and install the Kinect for Windows SDK available from the Microsoft website. More details regarding how to install the SDK and other official documentation are available on the Kinect for Windows websites at <http://devwx.in/16CgYYx>.

It can be assumed that the new push for Kinect for Windows might be in order to accompany a new upcoming Xbox console in the near future. The blog post announcing these code samples also says that Microsoft will soon be looking for contributions, feedback and discussions from developers so that they will be able to interact with other community members with similar interests. >

Handset insurance plans for devices

>>Nokia and New India Assurance have announced a new partnership to provide a new handset insurance plan that will cover all risks related to theft, burglary and damages to mobile phones which are normally not covered under warranty. The insurance premium will be Rs. 50 or 1.25 per cent of the cost of the mobile phone – whichever is higher. This offer will be available only for handsets purchased from genuine Nokia stores. Read:
