

>>Apple devs are making more money than Android ones >>

>>Girish Ramdas, Co-founder and CEO, Magzter

When did you start Magzter?

Long ago, we used to run a software and app development company based in Chennai. Also, there was a media company called galatta.com with its own magazine (like a Filmfare for south India called Galatta Cinema). In 2009 when the App Store was launched for the iPhone, we created our own iPhone app. In 2010, we followed this with the iPad app for the magazine and eventually by Android. Given the tech focus and hindrances to monetisation, we realised this is a challenge most publishers would face, which resulted eventually in Magzter.

What is a common trend you find with respect to platforms?

I think in the US, Android has beaten Apple. However this is with specific to device shipments. However, what's important is that you don't make money by getting your app downloaded. Generally an Apple user is aware of the App Store from the very beginning, having given his/her credit card details, as compared to Android with a variety of users on low end budget devices. Hence Apple developers are making more money as compared to Android developers.

What is your outlook towards the future?

I think cross platform aggregation is the future for this business. You can make your own app. You can make iOS or Android apps, but you need to be able to subscriber on any device. Whether you own a Samsung phone, or an Apple device, you must be able to read content. That is what we are doing at Magzter. >

>>You've been following devworx every month as you enjoy your favourite technology magazine. With your support, devworx has been on a steady rise, and is discovering its identity with you – the reader – the developer. While on one hand, it's an extension of your most trusted brand – Digit; on the other, it's tailored for application developers in India.

Whether you're an app development company based out of India, an application developer, or simply an enthusiast – you are nonetheless, a catalyst in India's growth as a software development powerhouse. Be it the Large Hadron Collider at CERN, or the Curiosity Explorer currently roving across Martian terrain,

Indian technologists and developers are a very close part of cutting edge innovation across the globe. We want to help you innovate!

devworx is an attempt to recognise such stories in software innovation, early on! Irrespective of where you stand in the scenario illustrated, we invite you to be a part of us. Whether you're an established app development company, a policy maker influencing the mobile ecosystem, or an individual developer, there's a lot to share with the community. We eagerly want to hear your story. Write to us today! Visit www.devworx.in and go to the Contact us and Careers pages for further information. You can also email us at editor@devworx.in.
