

Start8 gives you four ways to show the Windows 8 app menu: from small, all the way up to full-screen, which is the default app drawer

Why purple, you ask?!
Because you can...

The Windows 8 style scales from: work exactly how Microsoft intended it, to, shrink the Windows 8 menu so that it doesn't take up the entire screen. The options of Full Screen and Small will let you go down and up this scale. I find Wide to be the best of both worlds but of course, YMMV. You can also customize the Start button: go with the default Windows logo, or Startdock's own, or use a custom image. The Custom image option will incidentally open a nice library of logos – from cat paws to Windows XP; or use your own image.

Control: The range of options under this menu give you finer control over how and when the Start8 menu is displayed. Broadly, it allows you control over how the menu should behave when you are at the Desktop, and when you are in a Modern UI app. The options here are self-explanatory and unless you want absolute control over the menu's behaviour, should be left to the default values.

Desktop: Under here, you can toggle showing the Start button. Under the Windows 8 regime, the Start button is no

longer part of the taskbar. This section can bring it back. Yay! You can also configure the taskbar translucency and enable or disable Windows 8 features such as the hot corners, hide modern UI apps from the Start Menu, and auto-start at the desktop when Windows 8 boots (the default Win8 behaviour is to start at the app screen).

Using ModernMix

ModernMix is a very straightforward application: install it, run it and you will see a simple configuration screen that gives you options for how Modern applications are to be treated. Fullscreen is the default Windows 8 behaviour; if you have purchased and installed ModernMix, this isn't what we want. Fullscreen with taskbar will do basically that: it will open a Modern app in fullscreen but you will also have access to the taskbar. Finally, you can trigger a Modern app as a Window – this would be akin to how you would expect any Windows, err, window to behave.

You can control a Modern app behaviour under two scenarios: when an app is launched from the Start menu, or when the app is launched from the Desktop.

ModernMix also enables a toggle mode for all Modern apps launched. This toggle is shown as an overlay in the top right corner of a Modern app and enables you to switch from default full-screen behaviour to the last state of that Modern app under ModernMix (essentially remembering the last state of the app's Window). The toggle can also be mapped to a hotkey – F10 by default.

By default, ModernMix remembers the last state of each app you have launched. In case you wish to change the behaviour, you can do so under the App Settings option. Once setup to your
