that pull you'll get on the shop floor towards the two HP machines and even the Acer Aspire V5.

Dell has conferred a fairly sophisticated design on the Inspiron 15R, which was actually priced much higher when launched. The black and grey colour combination throughout the machine will be equally comfortable in a bedroom and in a

boardroom. Again, a very thick laptop, but where it really loses points is the quality of the keyboard. The key shape is slightly more rectangle than square, and the travel and response doesn't induce any confidence with regards to successful quick typing. The touchpad, out of the box, was a tad wonky, but the driver update solved that to a certain extent. The down firing

speakers, placed on the near side curve under the touchpad and the palmrest area, don't help sound quality, because when placed on a table, the sound tends to reflect quite a bit.

The Asus VivoBook F202e is a unique laptop among this bunch. The 11.6-inch display allows it to have a form factor unmatched by any other, by a mile. Yes, it does away with

an optical drive, and has fewer USB ports than its bigger rivals, but still keeps the critical bits perfect. The build quality is brilliant, and the keyboard is excellent to use. We initially had apprehensions, based on experience with netbooks in the past, but Asus has done a brilliant job with the VivoBook.

HCL, unfortunately, was a big disappointment. The build
