quality of the Icon M notebook was frankly much below the quality offered by the other laptops in this price band. Materials used smack of cost-cutting, and have a very rough feel to them. The build quality is "that will do" type. An example of this is the memory card slot cover that doesn't fit properly most of the time. Quite honestly, due to this we can't rate the HCL

Icon M any better in the build quality ratings.

Category 2:

₹40,000 - ₹49,999

We kick off this band with the two Sony VAIO notebooks – the E-series. The plastic used is fairly solid and of good quality, and there's absolutely no flex anywhere on the chassis. Slightly thicker than its more

expensive S-series and T-series siblings. A unique design element can be seen in the lid that sits slightly shorter than the keyboard deck, when closed. It has a well-spaced keyboard, but could have done with a little more key travel.

The Acer Aspire V5-571-53334 is possibly the best looking of all the notebooks in this category. The Aspire V5

is slim, like its less expensive sibling and the brushed metal look with light grey colour is a refreshing change. It's marvellous how Acer makes these V5 series so slim while managing to pack in fairly powerful specs. Both the Acer Aspire V3 notebooks are the exact opposite of the V5 series – thick, heavy and a maintenance hungry glossy black finish. While the V3s have been put together very nicely, the glossy finish will attract and highlight fingerprints, dust and even the lightest of scratches very easily. They have excellent keyboard quality though, doing away with niggles such as the soft key response of the V5, for a more precise and crisper response. If you can handle the glossy finish, these notebooks are worth considering.

Category 3:

₹50,000 - ₹59,999

The Lenovo IdeaPad Z500 is an update to the slightly older IdeaPad Z580. The exterior, however, bears literally no family resemblance. We had said when talking about the Z580 that it is built agreeably, but lacks in attractability. The Z500 has a design very similar to the IdeaPad U series of ultra-books, albeit in a slightly larger form factor due to its bigger display size. The lid and the keyboard deck have the rubberized finish, and globally Lenovo offers multiple colour options. The extremely slim form factor is another aspect that will grab your attention, particularly after you've scanned the spec sheet in detail! The keyboard could have been a bit better; we didn't like the idea of each key having a bit of a curve at the bottom. The tweaked design of the Enter and Shift keys also has an impact on how quickly you can familiarize yourself to it. No taking away from the
