

100 games for PS Vita

The PlayStation Vita is about to get over 100 games this year which will all be sold via the PSN <http://digit.in/ZbTC8e>

Weather forecasts on FB

Facebook pages will now have weather forecasts on posts about event pages or for public places like parks and cities

Laptops Test

Also, the Beats Audio goodness makes a lot of difference, something anyone using this machine for multimedia would appreciate. The subwoofer won't make your things vibrate off the table, and it adds an element otherwise missing on most laptop speaker setups.

If you don't mind the blatant gaming laptop looks, the IdeaPad Y500 would appeal to you for, um, gaming! This is the only machine to have the GT650M graphics chip on board, at least in this test. The 3D Mark O6 scores were by far the highest across all laptops. Same advantage was seen in the 3D Mark 11 tests. However, the GT645 chip seen on sibling, the IdeaPad Z500, actually scores 0.5 FPS better in the Unigine benchmark. The 1080p display is a huge bonus, and while the VAIO S has the advantage in terms of colour richness, the Y500 does very well in text reproduction and viewing angles.

The Winners

After the exhausting testing of 25 laptops, we hope we've been able to help you make a smarter buying decision. Just to emphasise on the stand-out performers, here are the winners, and reasons for recommending them.

Best Performer

HP Envy dv6-7206tx: It was a very close call between the dv6 and the IdeaPad Y500, with the HP dv6 taking the top step of the podium, but not by much difference. It has a combination of very good performance, an excellent keyboard, good build quality and fairly good battery life. The dv6 has a very premium feel to it, something that quite a few expensive laptops miss out on. Some may even add the Beats Audio goodness

HP Envy dv6 - 7206tx

to this list! The only thing that goes against the dv6 is that HP still hasn't updated it with a 1080p display. A must buy, if this is within your budget.

Best Value (Category 1: ₹30,000 - ₹39,999)

HP Pavilion G6-2301ax: This was truly a surprise. The only AMD-powered machine in this test, but the kind of performance it showed put most rivals in the category in its shadow. The excellent gaming performance adds to the overall value of the product. Very good battery life, and a build quality that is much better than what you would expect for around ₹30,000. If you're on a tight budget, this is the machine to consider. If you can extend the budget a little bit, you can also consider the Intel

Core i3 powered **HP Pavilion G6-2227tu.** These two machines are the standout performers in this crowded category!

Category 2: ₹40,000 - ₹49,999

Acer Aspire V3-571G-33114G75 Makk: For ₹40,000, what you'll get is a very capable performer with a Core i3 processor and very good graphics performance. The build quality is excellent, but some potential buyers may not appreciate the glossy build quality. But, for a price of ₹40,000 in the market, this machine performs better than both Sony VAIO E-series laptops and even the HP G6-2237tx when it comes to gaming. Alternatively, the **HP Pavilion G6-2301ax** is almost as good as the V3 at ₹30,000.

Lenovo IdeaPad Z500 (59-341235)

Category 3:

₹50,000 - ₹59,999

Lenovo IdeaPad Z500: Straight out of the box, the Z500 with the soft feel finish on the lid and the keyboard deck looks classy and elegant. It hits all the check marks of a very good machine. For a little more than ₹50,000, the Z500 gives very good performance, but really pips all the rivals in this category in gaming performance. The Nvidia GT645M does very well in a category that seems to be loaded with the AMD Radeon HD7670M processor, and the one GT630M in its elder sibling.

Category 4:

₹60,000 - ₹70,000

Lenovo IdeaPad Y500: Like we said, it was neck and neck between this and the HP Envy dv6 in terms of overall performance. It's the Nvidia GT650 chip in the Y500 that gives it a distinct advantage in the gaming aspect. The LED lighting on the keyboard gives it the "I am a gaming machine" look. And if that's what's important to you, this is the machine to consider.

Editor's Pick

Asus VivoBook F202e: Among all the laptops that we tested, the VivoBook is a refreshing change. The high quality 11.6-inch touch display also means that it's compact, light and portable. The build quality is worthy of a much more expensive machine. We found the keyboard to be surprisingly comfortable to use, and precise. Yes, the Core i3 processor means that it's not setting the test score sheets on fire, but is more than enough to not hamper your work. We would recommend this to anyone who needs a machine for basic computing tasks. And it doesn't cost a bomb.
