Sound and Fury

On a quest to discover true aural nirvana

Anirudh Regidi
Siddharth Parwatay
readersletters@thinkdigit.com

A great set of headphones is more than just a device to play music on. For many it's an escape; an escape from reality, from the noise, cacophony and mundane drudgeries of life. Put on a set of cans and you're instantly transported away from reality into a sensory joyride that's only yours for the taking. No more

annoying colleague, no more mindless chatter on your daily commute – it's just you and your personalized entertainment. In fact if someone is wearing headphones people naturally tend to leave them alone unless it's really important.

This brings us to the second aspect of our test: Headphones can not only enhance your aural experience, but also ensure that you don't disturb others. Gaming headphones for instance, apart from promising to provide positioning precision,

also let you enjoy your gaming sessions without anyone asking you to "turn down the volume" or "do your homework".

At Digit, we've forever held a deep-seeded passion for sound. Be it headphones, speakers, amps, sound mixing, and even instruments – there are audio enthusiasts as far as the eye can see; which in our case is not very far thanks to our new startup-esque loft office. Within these audio enthusiasts there are opinionated camps such as the age old speaker vs headphone

duelers; the neutral purists or the "flatliners" as we like to call them, who believe audio equipment should only do the job of reproducing the signal as the recording engineer intended it to be. For them any device which causes a deviation from that intended sound, whether good or bad, should be pooh-poohed. Then there are the "coloured" boys (disclaimer: we're not racist), who swear by the sweet twang of a Grado, or the shrill allure of a Klipsch. The reference gear enthusiasts believe that any
