Enthusiast gamers

These are the more mundane gamers. Ones that want to experience a game for what it is, enjoy the experience, revel in the ambience and be transported into another world. Such a gamer only expects an enjoyable experience and has not yet been bitten by the bug of pro-gaming. One who would rather play Crysis 3 than Counter-Strike.

This type of gamer has two options at its disposal, one is the **ROCCAT Kave** which, as a true 5.1 set, provides by far the best surround-sound experience on

any headset used thus far. Headsets like the **Sirus S** do have multiple drivers but don't even come close to providing a definitive 5.1 experience. The **Kave's** performance is only second to the **SteelSeries** and while these sets will not enhance the experience in games like Quake or Counter-Strike the way the **SteelSeries** sets can, the immersive 5.1 experience provided in games like Dead Space 3 and Crysis 3 need to be heard to be believed. The **Kave** was the only set in which we could clearly discern rear audio and actually felt like there was something

behind us. The build quality is very nice and while we wish the cables were braided, they seem sturdy enough.

The **Creative Tactic 3D Omega** (or the **Sigma** if you want a wired set) is another excellent option in this category. It's expensive, but it's a wireless set with a SoundBlaster adapter that is quite good and negates the need for an additional sound card. The headset is large and comfortable and while the set is good, the mushy and overpowering bass leaves a lot to be desired in terms of actual quality, but is enough

to provide you with an enjoyable experience. The bass is so strong in fact, that the headset actually starts vibrating in bass heavy sequences.

Casual gamers

These are normal human beings who just play games for fun and aren't really concerned about how they're faring in the game. A creature that will just start a game without touching the settings or even pushing up the difficulty a notch.

For such a gamer, the right headset is almost impossible to pick. If it wants a set that just
