

Windows Phone 7.8 and 8

Microsoft has marked a date when it will end support for Windows Phone 7.8 as well as Windows Phone 8 and the date is September 9, 2014. <http://dgit.in/ZUivmg>

Powershot SX280 HS

Canon has added another camera to its Powershot range of shooters - the Canon SX280 HS. The camera has WiFi, a 20x lens and an ISO of 6400

Panasonic Lumix DMC-GF5

Great entry-level ILC for the PnS upgrader not desiring the DSLR heft

Panasonic Lumix GF5 is an upgrade to the GF3 and is a mirrorless compact system camera. It houses a 12.1MP Live MOS sensor and comes bundled with a Lumix G Vario 14-42mm power zoom lens which has a comparatively slimmer profile as compared to the regular, mechanically controlled zoom ring sporting 14-42mm lens.

Build quality is quite good thanks to the aluminum body and the arrangement of navigational buttons is very intuitive. The only issue is the placement of the manual focus lever on the lens which is tricky to use. The GF5 locks focus quickly

Price
₹49,990

and we found it hunting only under low light conditions. The base ISO performance is quite good. There is barely any image noise from ISO 160 to 400. At ISO 800 prominent luminance noise is noticed in the shadow areas. At ISO 1600 luminance noise starts becoming prominent throughout, but the images are usable for online sharing.

Image quality is quite good and colours appear natural. You can over or undersaturate them using various Photo Styles. Sharpness at the centre was great, but around the corners, you notice some loss in details. The i-Dynamic mode is quite impressive and it is able to extract more details from the highlights and shadows when it is on as compared to when it is off. Video quality was patchy indoors and was much better outdoors. But you will notice framing when you pan the camera. The motor noise is audible while zooming though.

The Panasonic Lumix GF5 is an ideal mirrorless camera for someone wanting to upgrade from a point and shoot, but does not want the heft of a DSLR. At ₹49,990, it is still priced on the higher side.

ADATA UC500 32GB

Interesting design and decent pricing

Price
₹1,400

This 32GB wine-bottle shaped USB 2.0 pen drive looks smart and comes with a rubber beak. A retractable mechanism opens up the USB 2.0 connector and a locking mechanism keeps it in place. Transfer speeds are as follows: Sequential/Assorted Read (MB/s): 22.87/14.54 and Sequential/Assorted Write (MB/s): 11.1/7. We have seen better USB 2.0 pen drives. The price of ₹1400 is in line with other pen drives sporting this capacity. Go for this drive only if you like its design as you may have noticed that speed is not really its forte.

Wickedleak Wammy Titan

Good price but marred by performance issues

Price
₹12,600

Wickedleak Wammy Titan comes at an economical pricing of ₹12,600 which is good enough for such a device. It has a good display, decent battery life and a stock Android OS but we found that it is also marred by issues such as poor camera colour rendering, poor touch response around the edges, battery life indicator issues and so on, which are critical parameters to consider when getting a phone. Looking at the performance as compared to other budget Android devices, we find it hard to recommend.
