The latest update to the Series 5 still resembles the previous version of the Series 5 ultrabook and even offers the same colour combinations.

This refreshed version however, does fix many of the issues that plagued the earlier model, such as the flex in the palm rest.

The LED backlit display has impressive colour richness and text readability. What we are delighted about is that this is possibly the closest we have come to a true matte display on an ultrabook.

The PC Mark 7 score of 3538 is surprisingly lower than the HP ENVY TouchSmart 4, despite more RAM. Even when used as the primary machine, the Series 5 Touch feels a bit sluggish. The primary reason behind this is the quantity of trial and

preloaded software that Samsung burdens this machine with.

The keys are very nicely spaced out, and are slightly larger than what we see on a MacBook, for example. Adequate spacing between the keys is conducive for a quick typing session. The only little thing missing is the chunky feel on keypress, which feels a little soft, not giving back a precise response.

The tested battery life was 297 minutes, which is almost the same as the HP ultrabook. Good enough to almost get you through a day at work on a single charge.

As an ultrabook, the Series 5 (NP-540U3C) builds on what the previous edition offered, with the added touchscreen for Windows 8.

BenQ GW2760HS

Wonderful contrast, good features and priced right

Features 75
Performance..... 85
Build Quality 60
Value for money..... 75

The GW 2760HS is the latest 27-inch monitor from BenQ which sports a vertical alignment (VA) panel with an LED backlight. The 27-inch monitor is surrounded by a thin, black, glossy bezel and it measures only 11.5mm on the sides.

The glossy black oval base is home to the stand, which will let you tilt the monitor but not swivel it. The display and power ports are recessed and there is an HDMI, DVI and D-Sub port along with the audio and microphone jacks. It also houses 1Watt speakers.

While the build quality is great, the monitor tends to wobble on mild tapping. The OSD control buttons placed behind the monitor are quite well built and provide good feedback, making an audible clicking sound every

time we use them. The OSD is well laid out and very intuitive to use. It offers various user modes including movie, eco, gaming, photo and even a reading, mode.

Our Spyder3Elite colorimeter tests gave a brilliant contrast ratio of 1327:1 at 50 percent brightness and

75 per cent contrast ratios with a black level reading of 0.14 which is quite good. Even in the *Lagom.nl* tests, the black to white- transition was quite smooth with hardly any colour tinging. In our tests with full HD clips, the blacks were quite deep and skin tones looked natural. There was a lot of detailing in scenes

involving close-ups. In solid scenes we did not notice any banding. The gaming experience was also quite good. This monitor is an excellent purchase at this price point.
