 Problem with my internet :
 I use windows 8.
 It shows that I am connected to the internet bt still can't open any page on download anything !! :/

Ardhya Bhatt if its a wifi, try browsing the net on some other device (say a cellphone or any other device) and see if it works there. this step will give u the exact source of problem (internet or ur computer)

Sidhant Gupta Yes it's wrking evry other device n pc ...!!
 Like · Reply · Sunday at 1:34am

Ardhya Bhatt if its internet problem then u really cant do much than pay off hr pending bills or contact ur ISP. if the problem is on ur comp, then check the network passwords..check ur modem status etc

 Hi Guys, I'm using Dev C++, version 4.9.9.2, I'm getting errors while using it. As soon as I compile any program, my Quick Heal shows up that a Trojan has been detected. And when I try to Run it, message box says "Source file not compiled". My friends are also getting the same error. What can be done to solve this problem???

Like · Comment · Share · Saturday at 1:58pm

Ardhya Bhatt Its a fake alert. Your antivirus is not able to identify what is a virus and what is not. (Thats why its quick heal and not Kaspersky). Its a base problem with many immature antivirus programmes... They find any "executable" file, they flag it as a virus (even when its actually not)
 Like · Reply · Sunday at 1:30am

Ardhya Bhatt Disable ur antivirus and then start ur programming
 Like · Reply · Sunday at 1:30am

Avirup Basu disable ur antivirus.
