Snapped and scanned, but satisfied you are not? Here's how you add that touch of class to your digital images!

Reducing Red-eye Effect

Eye pupils dilate in the dark, thus reflecting the flash light in the eye's blood vessels. This gives the person a 'red eye'. Hence, avoid photographing in the dark. If it's absolutely necessary, use a camera with red-eye reduction feature.

Tell the subject do not look directly into the lens. If possible, use a removable flash that is placed at some distance from the camera. You may also use photo management software such as Photoshop album, Picasa, ULead Photo Explorer, JASC to remove red eye.

Cropping

Cropping is used to edit unwanted portions of a photograph. Maintain the aspect ratio for prints when cropping using software. For example, if you need a 5 x 7 print, you will need to crop the image precisely to that size. Open Photoshop and press [Ctrl] + [R] to enable rulers. Right-click on the ruler, and select Inches to change the ruler unit. Now, drag the horizontal
