

Wipe Off Dust And Scratches

Make use of dust and scratch removal software to get clean scans. One such plug-in is Kodak's Digital ICE (www.asf.com). Apply the noise filter to the photo in Photoshop by going to **Filter > Noise > 'Dust and Scratches...'**. Next, despeckle the image by going to **Filter > Noise > Despeckle**.

You may also use the Clone Stamp Tool to clone a cleaner area to the dusty one. To use this Photoshop tool, press [C] and click on an area that resembles your target area, while holding down [Alt]. After defining the source, release [Alt] and paint in the normal way. Do remember to zoom in and keep the brush size smaller for better results.

Creating Panoramas

The latest version of Photoshop CS comes with Photomerge—a feature that allows you to create panoramas in just a few clicks. The best part is that you don't even need to fix your camera on a tripod while taking images, as Photoshop adjusts the level automatically. Open Photoshop CS and click on **File > Automate > Photomerge**. Click on Use Files and use the browse button to locate all the images that want to use for creating the panorama.

Make sure that the 'Attempt to Automatically Arrange Source Images' check box is checked, and click OK. A dialog box with your images identified and adjusted comes up. Click OK to accept and use the Crop tool to

Create an impressive panorama in minutes using Photomerge in Photoshop CS!

crop out unnecessary portions. Visit www.panoguide.com—a Web site dedicated to creating panoramas, for more tips and software.
