

Black and White: Not having or not capable of producing colours; as in “black-and-white film”; “a black-and-white TV”; “the movie was in black and white”.

Blog: A blog is basically a journal available on the Web. The activity of updating a blog is ‘blogging’, and someone who keeps a blog is a ‘blogger’. Blogs are typically updated daily using software that allows people with little or no technical background to update and maintain the blog.

Brightness: A measure of the overall intensity of the image. The lower the brightness value, the darker the image; the higher the value, the lighter the image will be.

Bundled: Characteristic of smaller software programs sold with larger programs or electronics.

Burst mode: The ability of a camera to take one picture after another as long as you hold down the shutter release button.

Camera Angle: The angle defined by the position of the subject matter in relation to the camera lens.

Camera Lens: An optical device made of glass or other transparent material that forms images by bending and focusing rays of light. A lens made of a single piece of glass cannot produce very sharp or exact images, so camera lenses are made up of a number of glass ‘elements’ that cancel out each other’s weaknesses and work together to give a sharp true image. The size, curvature and positioning of the elements determine the focal length and angle of view of a lens.

Camera, Film Camera: A device for taking photographs generally composed of a lightproof enclosure having an aperture with a shuttered lens through which the image of an object is focused and recorded on a photosensitive film or plate.

Card: The sealed package containing storage chips or other devices with electrical connectors that make contact when inserted into a card slot on a camera, printer, computer, or other device.
