

- Open the image in Photoshop
- Press [C] on your keyboard to select the Crop tool
- Select the area you wish to keep on the image
- Press [Enter] on the keyboard, and you'll have the image cropped to the selection

Cropping an image is useful in a variety of situations

Red-Eye: Red-eye reduction can be very tricky. If not done right it can make eyes look very unnatural, which could get quite distracting. We'll show you a great method to remove red eye from images. It may be a bit complex for a beginner, but the results make it worth it.

- Open the image in Photoshop
- At the bottom of the layer window, click on the circular icon that stands for 'Create new fill or adjustment layer' and select the Channel Mixer option there

Removing the Red-Eye (right) from the original (left)
