

and accordingly adjust the aperture so that it's just the right size to get bright sharp photos. Keep spare batteries with you.

Warm Tones

Normally, the default white balance setting for most digital cameras is set to 'Auto'. Though this is fine in most cases, sunny landscapes and portraits taken in bright light could turn out dull. Hence, change its setting to 'Cloudy' to get warmer reds and yellows that make the picture look better.

Polarising Filter

Polarising filter is used for outdoor shoots since it reduces glare and reflection, and results in more saturated colours, especially in the case of sky. Use your sunglasses in case your camera doesn't have support for one. Place the glasses as close to the camera as possible, check the LCD to see that its frame does not obstruct the view and shoot. For better results, use it when the light source and the subject are at right angles, i.e., when the sun is exactly over your head. Further, set the white balance to 'Cloudy' for warmer photos.

Flash Modes

Normally, digital cameras have three flash modes—Auto Flash, Fill Flash and Red Eye Reduction.

Auto Flash mode is used for general photography. In this mode, the flash determines whether it needs to be fired or not, based on the amount of light present. This mode is represented on the LCD by a lightning icon with a capital 'A'.

In the case of Fill Flash, the flash is always fired. This is useful when the subject is

Incorrect usage of a flash can make even the cutest of puppies look evil
