

sitting in the shade with bright sunlight around. If set to Auto, the flash would not have fired, resulting in dark spots around the eyes. In the Red-Eye Reduction mode, the flash is fired several times before the shutter actually opens. Thus, the eye-pupils are contracted and the red-eye effect reduces. Use this mode when there is very little light and the photo depends on the flash.

Snapping Water

A camera with a shutter speed that's slower than a second or two can be used to shoot flowing water and make it look like a painting. Set your camera on a tripod. Adjust the aperture either to f-8, f-11, or f-16 for better depth of field. Now, set the shutter speed to 2 seconds, and shoot. Since you are using long exposures, make sure that the subject is positioned in the shade. Use polarising filters to enhance the effect.

Master The Modes

Digital cameras have many presets, called modes or macros that let you click photos differently. Some of the common modes are

Making a waterfall look like a painting
