

As we mentioned above, there are chances that the erratic behaviour may not even be a virus, especially if it's not detected by the resident anti-virus. Still, to be safe, run a complete virus scan on your computer with the latest anti-virus definitions for the installed anti-virus scanner. If you don't have an anti-virus installed, or think it may not be capable of detecting the virus, you can run an online virus scan from any of the Web sites mentioned in Chapter 2.6.

- If a virus is detected, use the steps provided in Chapter 2.5 to get rid of it. In case you feel that you may do more harm than good on your own, and might prefer to have an expert handling the situation, then take the following steps as a precautionary measure:
- If your computer is connected to a network, unplug the network cable from your computer.
- Switch off the computer. Use the proper shutdown sequence instead of simply switching off the power. Using an infected
