

rity attacks and the punitive actions that will be taken should a security attack be detected.

Last, create an administrator-acceptable use statement to explain the procedures for user account administration, policy enforcement, and privilege review. If your company has specific policies concerning user passwords or subsequent handling of data, clearly present those policies as well. Check the policy against the partner-acceptable use and the user acceptable use policy statements to ensure uniformity. Make sure that administrator requirements listed in the acceptable use policy are reflected in training plans and performance evaluations.

2. Conduct A Risk Analysis

A risk analysis should identify the risks to your network, network resources, and data. This doesn't mean you should identify every possible entry point to the network, nor every possible means of attack. The intent of a risk analysis is to identify portions of your network, assign a threat rating to each portion, and apply an appropriate level of security. This helps maintain a workable balance between security and required network access. Assign each network resource one of the following three risk levels:

- Low Risk Systems or data that if compromised (data viewed by unauthorised personnel, data corrupted, or data lost) would not disrupt the business or cause legal or financial ramifications. The targeted system or data can be easily restored and does not permit further access of other systems.
- Medium Risk Systems or data that if compromised (data viewed by unauthorised personnel, data corrupted, or data lost) would cause a moderate disruption in the business, minor legal or financial ramifications, or provide further access to other systems. The targeted system or data requires a moderate effort to restore or the restoration process is disruptive to the system.
- High Risk Systems or data that if compromised (data viewed by unauthorised personnel, data corrupted, or data lost) would cause an extreme disruption in the business, cause major legal
