

a new Bluetooth jacket, also developed for Burton.

Motorola also recently unveiled a new line of Bluetooth headphone and audio dongles, allowing you to dump audio from any device with a miniJack to wireless headphones.

D-Link DGL-4300 Gaming Router

The D-Link DGL-4300, proclaims to be the first ‘gaming router’, and is designed to optimise Ethernet traffic for a better gaming experience.

Though it sounds ridiculous at first (why would gaming need its own router?), it starts to make a little more sense once you understand how it works.

The D-Link DGL-4300

The router gives priority to gaming packets, so even though it allows huge file transfers, it sets them as background processes. D-link calls this intelligent packet processing engine technology ‘GameFuel’.

The Egg

The Egg, designed by students Jennifer Bove, Thomas Stovicek and Nicholas Zambetti, is a wireless device that can communicate last-minute re-scheduling of your appointments with other Egg owners.

As time passes, and your appointment draws near, the light inside the Egg starts to dim. You can reschedule your plans with your friends by

The Egg that reschedules appointments
