

6.1 FAQs And Troubleshooting

What is an Access Point?

An access point (also known as a base station) is a wireless server that connects clients to an internal network. They are wireless LAN/WAN transceivers that act as a centre point of an all-wireless network, or as a connection point between wireless and wired networks.

Does an antenna affect wireless LAN security?

Yes. The wrong kind of antenna could extend the wireless network beyond the physical perimeter of your home or office. Choose the
