

15. The first tab is 'General'. Check this if your modem is displayed in the 'Connect using...' box. Locate the phone number and see if it is the same number you specified when you configured the connection using the 'New Connection Wizard'.
16. Now, click on the 'Networking' tab. See if the 'Type of dial-up server' is set to 'PPP: Windows 95/98/NT4 /2000, Internet'. Next, click and highlight Internet Protocol (TCP/IP), and click the 'Properties' button.

17. In the window that opens, check the settings. They should be 'Obtain an IP address automatically' and 'obtain a DNS server automatically'. These settings should be chosen by default.
18. Now locate the dial-up connection icon on your desktop and double-click it. A dialog box asking for your username and password will pop-up. Fill in the username and password and click on 'Connect'. You will hear a lot of whistling and dialling and
