

3.7.2.2.4 Prepare data from another PivotTable Report

There are a few things to consider in preparing data from another PivotTable report:

- m Make sure both PivotTable reports are in the same workbook: If the original PivotTable report is in a different workbook, copy the original report to the workbook where you want the new report to appear.
- m Check the page field settings: In the original PivotTable report, you may have changed the page field settings so they retrieve external data for each page field item individually. In this case, you need to reset the page fields so they retrieve external data for all items at once. (For more information, type 'retrieve PivotTable page field data' in the Office Assistant or on the Answer Wizard tab in the Excel Help window, and then click Search.)

3.7.3 Creating A PivotTable Report

To create a PivotTable report, you use the PivotTable and PivotChart Wizard. Here, you do two things: (a) specify the data you want to use in the report, and (b) create the report framework. Later, you can use something called the PivotTable toolbar to arrange your data within that framework.

For example, you can choose which categories of data to include, and the corresponding data values to summarise. Next, tell Excel how to arrange the data categories in rows and columns of the report. When Excel creates the report, it automatically summarises and totals the data values. Here is the source data for our PivotTable report:

Product	Category	Sales	Profit
Product A	Category 1	100	20
Product B	Category 1	150	30
Product C	Category 1	200	40
Product D	Category 1	250	50
Product E	Category 1	300	60
Product F	Category 1	350	70
Product G	Category 1	400	80
Product H	Category 1	450	90
Product I	Category 1	500	100
Product J	Category 1	550	110
Product K	Category 1	600	120
Product L	Category 1	650	130
Product M	Category 1	700	140
Product N	Category 1	750	150
Product O	Category 1	800	160
Product P	Category 1	850	170
Product Q	Category 1	900	180
