

7.2 PowerPoint 2003

Create Bitmap Images Of Slides

If you want a quick way to send a single PowerPoint slide to someone, you can try converting the slide into a bitmap image. You can then resize, crop, and paste it into an e-mail message or an Office document. Here's how: open the slide you want use as an image. On the 'View' menu, click 'Notes Page'. The slide will appear on the notes page as an image. Right-click the slide image, and then click 'Copy' on the shortcut menu. The image is now stored on your clipboard, and you can paste it as a resizable object into any Office document.

Create A Photo Album Presentation

Did you know you could use PowerPoint to create a photo album? Here's how. On the 'Insert' menu, point to 'Picture', and then click 'New Photo Album'. In the 'Photo Album' dialog box, you can choose to add pictures from your hard disk or a peripheral device such as a scanner or digital camera. To add a picture from a file or disk, do the following: under 'Insert picture from', click 'File/Disk'. Locate the folder or disk that contains the picture you want to add to your photo album, click the picture file, and then click 'Insert'. Repeat for as many pictures as you want to add to your photo album. Or to capture them all at once, hold down [Ctrl], click each picture file you need, and then click 'Insert'. Next, specify the look of the album under 'Album Layout'. Finally, click 'Create'.

Nudging Objects

You can use the arrow keys to move objects very small distances. Select the object, then use your arrow keys. Each press of the key will move the object one 'Grid Unit', which is 1/12th of an inch. If you hold down [Alt] while nudging, or if you have the grid turned off, you can move the objects one pixel at a time.

Proportionate Resizing

Hold down [Shift] while resizing images. Doing so will allow you to resize an image without changing its proportional dimensions.
