

Switch Between Absolute And Relative Cell References

When you create a formula in Excel, the formula can use relative cell references, which refer to cells relative to the position of the formula, or absolute references, which refer to cells in a specific location. Formulas can also contain a mix of relative and absolute references. An absolute reference is indicated by the '\$' symbol. For example, \$A\$1 is an absolute reference to column A, row 1. When working with formulas, you can easily change column and row references from relative to absolute, and back again, using this handy shortcut: first select the cell that contains the formula. In the formula bar, select the reference you want to change. Press [F4] to toggle through the combinations.

Clear All Spreadsheet Formatting

Here's an easy way to quickly clear all formatting in your Excel spreadsheet. Click any cell in the spreadsheet and then press [Ctrl] + [A] to select all cells in the worksheet. Then on the 'Edit' menu, point to 'Clear', and then click 'Formats'.

Combining Text From Different Cells

The '&' symbol consolidates text information in the same way as the '+' symbol adds numbers. The space between quotation marks adds a blank character between the separated texts. To combine text using '&': in cell A1, enter the text "Digit" (without quotes). In cell A2, enter the text "is a great". In cell A3, enter "magazine". Now in cell A5, type the formula: =A1&" "&A2&" "&A3

Locking A Range Of Cells

If you want to lock only a particular range of cells along with the formula instead of locking the entire sheet, use the following steps. First, unlock all the other cells. This is necessary because all the cells start with their 'Locked' property set to 'True'. Select the entire sheet by clicking on the grey square to the left of the grey letter A at the top of column A. Go to Format > Cells. Click the 'Protection' tab. Uncheck the 'Locked' checkbox. Click 'OK'. Then, you can protect a certain number of cells. For example, let's protect A4:B10: select cells A4:B10. Go to Format > Cells. Click the
