

- m Click on a cell (e.g. A1), hold and drag the mouse across the desired range, un-clicking on another cell (e.g. D4) to select all cells between and including A1 and D4.
- m To select several cells which are not adjacent, press 'control' and click on the cells you want to select. Click a number or letter labelling a row or column to select that entire row or column.
- m One worksheet can have up to 256 columns and 65,536 rows, so it'll be a while before you run out of space.
- m Each cell can contain a label, value, logical value, or formula.
- m Labels can contain any combination of letters, numbers, or symbols.
- m Values are numbers. Only values (numbers) can be used in calculations. A value can also be a date or a time.
- m Logical values are 'true' or 'false.'
- m Formulas automatically do calculations on the values in other specified cells and display the result in the cell in which the formula is entered (for example, you can specify that cell D3 is to contain the sum of the numbers in B3 and C3; the number displayed in D3 will then be a function of the numbers entered into B3 and C3).

To enter information into a cell, select the cell and begin typing. Note that as you type information into the cell, the information you enter also displays in the formula bar. You can also enter information into the formula bar, and the information will appear in the selected cell.

When you have finished entering the label or value:

- m Press [Enter] to move to the next cell below (in this case, A2)
- m Press [Tab] to move to the next cell to the right (in this case, B1)
- m Click on any cell to select it
