

To change all columns (or rows) on a sheet at the same time, click in the upper left corner of the sheet (the intersection of the column labels and row labels) to select the entire sheet. Click on 'Format' in the menu, then select 'Column,' then 'Width.' The current column width is displayed. Overwrite the width with the desired width, and all columns in the worksheet will be resized to the new width.

3.3.11 Adding, Deleting And Copying Columns Or Rows

If you need to add information between existing columns or rows, it is easy to insert a new column or row. Right-click on a cell to bring up a menu of options. Select 'Insert' from the menu. Your options are:

- m Shift cells right: Move the contents of the selected cell and all cells to its right, one column to the right, and insert a new cell here.
- m Shift cells down: Move the contents of the selected cell and all cells below it, down one row, and insert a new cell here.
- m Entire row: Move this entire row and all the rows below it down one row, and insert a new row here.
- m Entire column: Move this entire column and all the columns to its right, one column to the right, and also insert a new column here.

If you need to delete a cell, or an entire column or row, right click on a cell to bring up a menu of options. Select 'Delete' from the menu. Your options are:

- m Shift cells left: Delete the contents of the selected cell, and shift all cells to its right one column to the left.
- m Shift cells up: Delete the contents of the selected cell, and shift all cells below it up one row.
