

Build Your Own Web Site

by David Karlins

This one-stop resource demystifies the process, showing you step-by-step how to plan for, construct, and publish your own Web site. Connect to a remote server, get a domain name, and gather content. Then, construct pages using a variety of tools. Learn to use pictures and graphics, format text, create links and animation, take advantage of interactivity, and input forms. *Build Your Own Web Site* is a complete and illustrated step-by-step guide to the skills, tools, and accessories you'll need to produce professional-level Web sites—quickly.

- m Establish a domain name and secure server space
- m Determine which Web site building tools work best for your needs
- m Use Dreamweaver, FrontPage, GeoCities, and other Web site authoring tools
- m Prepare text and photos for the Web
- m Create graphics, animation, sound, and other exciting Web features
- m Enhance your site with interactive search boxes and input forms
- m Use link-testing tools, hit counters, and online mail list managers
- m Increase traffic by working with search engines
