

3.4 Professional Hosting

The more common choice is to choose to host your site on a hosting company's servers, as this is much easier and you don't need to maintain servers. Besides, a hosting company can afford much better hardware and bandwidth than you ever could, and has trained professionals managing their servers.

If you take the time to search, you can find numerous good offers for Web hosting on the Net, with a lot of Indian hosting providers. You can also just choose to host your site with your registrar (the place you buy your domain from).

For example, as mentioned earlier, if you buy a domain from, or even host one at, GoDaddy.com, you can get 500 MB Web space with a 25 GB data transfer limit and 100 e-mail IDs with both POP3 and Web mail access for just \$3.95 (Rs 170) a month!

What hosting provider you eventually choose depends solely on your needs and budget, but you should definitely try and find user reviews. There's nothing better than getting feedback from people who actually use a company's services, and Web hosting is no exception!

Registrars such as GoDaddy.com offer great Web hosting starter kits, and even throw in 100 e-mail IDs with 5 MB space per ID, POP3 and Web mail access.

They also offer 500 MB Web space with a 25 GB data transfer limit for a mere Rs 170 a month. The only drawback is that you have to have a credit card!
