

writing of this article, if the latest version is 7.8, you can download version 7.7 for free. The latest free version is available at http://www.phpnuke.org/modules.php?name=Downloads&d_op=viewdownload&cid=1.

Installing PHP-Nuke

Once you have downloaded the file, unzip it to your hard drive. You will see three folders-'html', 'sql' and 'upgrades', along with multiple text files. Since you are freshly installing PHP-Nuke, all that concerns you is the 'html' and 'sql' folders. The 'upgrades' folder is meant for those of you upgrading PHP-Nuke to the latest version. The first thing you should do is read the 'Readme' and the 'Install' text files, as you should do before preparing to install any software.

Now all you have to do is follow the step-by-step instructions below to install PHP-Nuke.

Step 1: Creating A New MySQL Database

A MySQL database is what a PHP Web site uses to store data. It reads the MySQL database and displays content, and the settings that you select. When you sign up for Web hosting, you will be told how to control your databases. Most hosting companies

You can create a new SQL database from GoDaddy.com's control panel
