

offer a simple phpMyAdmin or mysqladmin front-end for managing your databases. In our example, using GoDaddy.com's hosting package, we got an allocation of one database, which we created from our account at GoDaddy itself.

You will have to create a database here and call it anything you want. Now you will have to use the phpMyAdmin or mysqladmin front-end to create the hundreds of tables and thousands of fields in MySQL that PHP-Nuke needs. Fortunately, all you need to do is find a link called SQL, as shown in the accompanying screenshots.

Step 2: Adding PHP-Nuke tables To The Database

Once you click on the SQL link, you will see something similar to what's shown in the screenshots. There will be an option to upload a file to the server and run the SQL commands in it. Basically, you need to upload the file called 'nuke.sql' which is in the 'sql' folder you came across after unzipping the PHP-Nuke installer.

Click on the SQL link to upload the nuke.sql file and create your tables
