

out different blocks in boxes in the screenshot (on previous page) to better illustrate this.

From the ACP, you can control which blocks are shown on your site, and more importantly, where on the site they appear.

You will see the following details mentioned: Title, Position, Weight, Type, Status, Visible To, and Functions with Edit, Activate/Deactivate, Delete and Show options. So, for example, let's say you want to move the Login block to the left of the Web site and disable the Languages block:

First, you click on the Edit icon in line with 'Languages'. In the new page that loads, you will see that you can change the option for Activate to 'No'. This will deactivate the Languages module, and you should also set the 'Visible to Subscribers' option to 'No', to hide the Languages block.

Now, just edit the Login block the same way, and just set the value of "Position" to "Left".

Now you can go ahead and play about with the blocks to see what you want where and what you want to remove. You can also create new blocks, with links to new pages that you construct. It's really very easy once you do it yourself.

Modules

Modules are like functions of your Web site, and can be controlled easily using the ACP. Clicking on the Modules link takes you to a page with a long list of modules. Here you have to choose what's important for your site to have and what isn't. Remember, there has to be at least one module linked to your home page. By default, this is set to the News module, as PHP-Nuke was primarily built for community boards. You can change this to anything else, and you can also download and install more modules from the Net.
